

# Shopify sales against Shopify Payments payouts

One month of a synthetic EU shop, in the real Shopify export layouts

The shop sold €529,976 of orders in March. Its Shopify Payments transactions for March come to €244,892 net, €15,943 of it paid out in early April. Where did the other €285,084 go, and is any of it money that should have arrived and did not?

SOLD IN MARCH

## From March sales to the payout, EUR

|                                               | EUR               |
|-----------------------------------------------|-------------------|
| Orders paid in March, all payment methods     | 529,975.80        |
| Paid through PayPal                           | –128,380.60       |
| Paid through Klarna                           | –99,928.80        |
| Paid manually (bank transfer, invoice)        | –18,150.35        |
| Paid in cash at the till                      | –15,710.00        |
| <b>Card orders (Shopify Payments)</b>         | <b>267,806.05</b> |
| Orders paid, no charge                        | –376.80           |
| Charged less than the order                   | –17.45            |
| Charged twice                                 | +266.00           |
| Card charges on orders paid through PayPal    | +792.95           |
| <b>Charges in the payouts file</b>            | <b>268,470.75</b> |
| Refunds: March orders, as recorded in Shopify | –9,934.50         |
| Refund larger than Shopify records (#9090)    | –103.95           |
| Refunds: February orders                      | –8,464.41         |
| Refund of the second charge (#7560)           | –266.00           |
| Chargeback                                    | –154.00           |
| Adjustment                                    | –23.40            |
| Card fees                                     | –4,632.87         |
| <b>Net for March transactions</b>             | <b>244,891.62</b> |
| of which paid out by 31 March                 | 228,948.49        |
| of which in transit, paid out in early April  | 15,943.13         |

Every line is a sum of rows of one of two files: the Shopify orders export and the Shopify Payments transactions export for March. The transactions file follows the columns [help.shopify.com](https://help.shopify.com) lists for that export; its fees are illustrative.

## What needs a person

| What went wrong                    | Order  | In Shopify | In the payouts     | Difference            |
|------------------------------------|--------|------------|--------------------|-----------------------|
| Order paid, no charge              | #8935  | 337.85     | —                  | –337.85               |
| Order paid, no charge              | #10394 | 38.95      | —                  | –38.95                |
| Charged less than the order        | #8345  | 52.95      | 48.00              | –4.95                 |
| Charged less than the order        | #9838  | 273.00     | 260.50             | –12.50                |
| Charged twice, second refunded     | #7560  | 266.00     | 266.00 + 266.00    | +266.00, then –266.00 |
| Card charged, order paid by PayPal | #9031  | 47.95      | 47.95              | +47.95                |
| Card charged, order paid by PayPal | #9490  | 745.00     | 745.00             | +745.00               |
| Refund larger than recorded        | #9090  | 99.00      | 103.95             | +4.95                 |
| Chargeback, order still paid       | #7795  | 154.00     | –154.00, fee 15.00 | –169.00               |

### What the owner learns

- **Half of March never passes through this account.** €262,170 was paid by PayPal, Klarna, transfer and cash, each with its own route to the bank and its own file.
- **Card charges cost 1.72% in fees** (1.73% with the €15 dispute fee). American Express carried 6.1% of card sales and 10.8% of the charge fees.
- **One dispute is not in the shop's books.** Order #7795 still reads paid; the card network took back €154.00 and €15.00 more.

### Still open, and why

78 March orders carry a refund in Shopify (€7,501.54) with no refund transaction in March. The orders export has no refund date, so an April refund cannot be told from a refund made outside Shopify Payments. The April transactions file closes it for each order; until then they are listed, not guessed.

### What the client receives

This protocol: every disagreement with both values, grouped by what went wrong; the table from sales to the payout; the list of what needs a decision or another file. For a monthly client, the same check every month.

Synthetic data. The payouts file was generated from the orders export and given, on purpose, the disagreements a real shop's files have; the reconciliation code reads the two files only, and was written by whoever planted the disagreements, so this shows the method, not a blind test. Against the planted list: seven of the eight planted kinds found with the right orders and amounts; the eighth, a refund made outside Shopify Payments, is among the 78 open refunds, where the two files put it.
