

What this document covers

- **113 figures of the report were reviewed; 35 could be recounted from the export: 27 match, 8 do not.** The other 78 are listed with the reason they could not be recounted. The sealed document's first sentence, that every number submitted for checking was recomputed, means every number submitted as checkable.
- **Why 78 could not be recounted.** 46 are not on the menu of figures agreed for this check, and 12 are per month where the menu has the quarter: these are limits of what the check was agreed to compute, not of the data, and the export would allow a recount of most of them. 10 are defined differently from the agreed rules. 10 describe the cleaning: the check removes the same rows but publishes no count of them.
- **The plan's proof.** The section on it says every check was tried. Of the plan's 127 checks, 108 fired when a copy of the data was broken the way each exists to notice. The other 19 were accepted by name without firing themselves: for some no breaker exists, and for the rest another rule stopped the break first. The table under that section names all 19.
- **The rules.** They were answered by an AI model under the owner's delegation, and each row says so. Their questions are printed in Russian, the language the rule set is written in; the last page gives them in English.

Everything after this page is the sealed verification_report.md, rendered without a change. Its SHA-256 is in the receipt.

Reconciliation of the report's figures with the export

Every number of the report `client/report.md` submitted for checking was recomputed from the export, independently of the calculation the report rests on. This document computes nothing: every value in it was written by the checks of the run, and it is sealed together with them.

The contracts of the check were fixed at 2026-09-23 18:30 UTC.

Summary

Submitted for checking: 113. Matches: 27. Does not match: 8. Not confirmed: 0. Cannot be verified: 78.

The report's numbers

Where	In the report	What it means	From the export	Tolerance	Status
	3,217	Orders counted in January 2026			cannot be verified
	2,615	Orders counted in February 2026			cannot be verified
	2,832	Orders counted in March 2026			cannot be verified
	578,510.00	Gross sales of January 2026, EUR			cannot be verified
	496,406.00	Gross sales of February 2026, EUR			cannot be verified

What the statuses mean

- **matches:** the number in the report equals the recomputation from the export, to the digits it is printed in.
- **does not match:** the number in the report differs from the recomputation from the export.

- **not confirmed:** the pack's calculation and the independent recomputation from the raw rows disagree with each other; the fault is in the calculation, not in the report, and the number can be called neither right nor wrong.
- **cannot be verified:** the number cannot be recomputed from this export; the reason is given below.

Cannot be verified

- 3,217 (Orders counted in January 2026): The checked code computes the number of sale orders for the whole quarter only, not for one month. `QUARTER_ONLY`
- 2,615 (Orders counted in February 2026): The checked code computes the number of sale orders for the whole quarter only, not for one month. `QUARTER_ONLY`
- 2,832 (Orders counted in March 2026): The checked code computes the number of sale orders for the whole quarter only, not for one month. `QUARTER_ONLY`
- 578,510.00 (Gross sales of January 2026, EUR): The checked code computes gross sales for the whole quarter only, not for one month. `QUARTER_ONLY`
- 496,406.00 (Gross sales of February 2026, EUR): The checked code computes gross sales for the whole quarter only, not for one month. `QUARTER_ONLY`
- 527,161.00 (Gross sales of March 2026, EUR): The checked code computes gross sales for the whole quarter only, not for one month. `QUARTER_ONLY`
- 15,368.05 (Discounts of January 2026, EUR): The checked code computes discounts for the whole quarter only, not for one month. `QUARTER_ONLY`
- 12,932.70 (Discounts of February 2026, EUR): The checked code computes discounts for the whole quarter only, not for one month. `QUARTER_ONLY`
- 15,377.20 (Discounts of March 2026, EUR): The checked code computes discounts for the whole quarter only, not for one month. `QUARTER_ONLY`
- 34,003.77 (Refunds of January 2026 orders, EUR): The checked code computes refunds for the whole quarter only, not for one month. `QUARTER_ONLY`
- 24,483.08 (Refunds of February 2026 orders, EUR): The checked code computes refunds for the whole quarter only, not for one month. `QUARTER_ONLY`
- 24,515.22 (Refunds of March 2026 orders, EUR): The checked code computes refunds for the whole quarter only, not for one month. `QUARTER_ONLY`
- 175.05 (Average order value of January 2026, EUR): A different definition from the one the checked code computes: one month's order value after discounts and before refunds, over that month's orders; the checked code's average order value is net sales after refunds over orders, and for the whole quarter only. `DIFFERENT_DEFINITION`
- 184.88 (Average order value of February 2026, EUR): A different definition from the one the checked code computes: one month's order value after discounts and before refunds, over that month's orders; the checked code's average order value is net sales after refunds over orders, and for the whole quarter only. `DIFFERENT_DEFINITION`
- 180.71 (Average order value of March 2026, EUR): A different definition from the one the checked code computes: one month's order value after discounts and before refunds, over that month's orders; the checked code's average order value is net sales after refunds over orders, and for the whole quarter only. `DIFFERENT_DEFINITION`
- 179.87 (Average order value in Q1 2026, EUR): A different definition from the one the checked code computes: order value after discounts and before refunds (1,558,399.05) over orders; the checked code's average order value is net sales after refunds over orders. `DIFFERENT_DEFINITION`
- 1,230,049.35 (Net sales excluding VAT in Q1 2026, EUR): A different definition from the one the checked code computes: net sales with each order's VAT share taken out; the checked code computes sales including VAT, and the owner's ruling is that partial refunds carry no VAT split, so a figure without VAT cannot be recomputed exactly. `DIFFERENT_DEFINITION`
- 5.33% (Refunds as a share of order value, Q1 2026): A different definition from the one the checked code computes: refunds as a share of order value; the checked code's refund rate is the share of orders with a refund. `DIFFERENT_DEFINITION`
- 364 (Orders fully refunded): The checked code does not compute this figure: it counts orders with a full or a partial refund together, and does not split them. `NOT_COMPUTED`
- 439 (Orders partially refunded): The checked code does not compute this figure: it counts orders with a full or a partial refund together, and does not split them. `NOT_COMPUTED`

- 1,815.05 (Shipping refunded to customers, EUR): The checked code does not compute this figure: it computes refunds of goods only, and no figure for shipping refunded. NOT_COMPUTED
- 84,817.12 (Refunded total in the export, shipping included, EUR): A different definition from the one the checked code computes: the export's whole refunded amount, shipping included; the checked code computes refunds of goods only. DIFFERENT_DEFINITION
- 6.04% (Refunds as a share of order value, January 2026): A different definition from the one the checked code computes: one month's refunds as a share of its order value; the checked code's refund rate is the share of orders with a refund, and for the whole quarter only. DIFFERENT_DEFINITION
- 5.06% (Refunds as a share of order value, February 2026): A different definition from the one the checked code computes: one month's refunds as a share of its order value; the checked code's refund rate is the share of orders with a refund, and for the whole quarter only. DIFFERENT_DEFINITION
- 4.79% (Refunds as a share of order value, March 2026): A different definition from the one the checked code computes: one month's refunds as a share of its order value; the checked code's refund rate is the share of orders with a refund, and for the whole quarter only. DIFFERENT_DEFINITION
- 1,910 (Orders that used a discount code): The checked code does not compute this figure: it computes the discount amount, not the number of orders that used a code. NOT_COMPUTED
- 22.0% (Share of orders that used a discount code): The checked code does not compute this figure: it computes the discount amount, not the share of orders that used a code. NOT_COMPUTED
- 13,271.60 (Discounts given under the code VIP20, EUR): The checked code does not compute this figure: it computes discounts for all codes together, not per code. NOT_COMPUTED
- 10,519.70 (Discounts given under the code WELCOME10, EUR): The checked code does not compute this figure: it computes discounts for all codes together, not per code. NOT_COMPUTED
- 7,919.25 (Discounts given under the code WINTER15, EUR): The checked code does not compute this figure: it computes discounts for all codes together, not per code. NOT_COMPUTED
- 6,437.40 (Discounts given under the code SPRING20, EUR): The checked code does not compute this figure: it computes discounts for all codes together, not per code. NOT_COMPUTED
- 5,530.00 (Discounts given under the code TENOFF, EUR): The checked code does not compute this figure: it computes discounts for all codes together, not per code. NOT_COMPUTED
- 1,385 (Units of Fjord Rain Jacket sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 16.3% (Share of Fjord Rain Jacket in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 1,048 (Units of Polar Down Jacket sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 15.6% (Share of Polar Down Jacket in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 1,118 (Units of Trail Hiking Trousers sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 6.9% (Share of Trail Hiking Trousers in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 1,272 (Units of Ridge Fleece Midlayer sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 6.7% (Share of Ridge Fleece Midlayer in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 1,486 (Units of Merino Base Layer Top sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 6.4% (Share of Merino Base Layer Top in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 281 (Units of Solo Trekking Tent sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 5.8% (Share of Solo Trekking Tent in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 744 (Units of Summit Daypack sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED

- 5.5% (Share of Summit Daypack in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 326 (Units of Down Sleeping Bag sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 5.4% (Share of Down Sleeping Bag in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 547 (Units of Storm Shell Trousers sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 4.8% (Share of Storm Shell Trousers in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 3,659 (Units of Hiking Socks Pair sold in Q1 2026): The checked code does not compute this figure: it computes each product's sales in euros, not the units sold. NOT_COMPUTED
- 4.3% (Share of Hiking Socks Pair in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of one in the other. NOT_COMPUTED
- 77.7% (Share of the top 10 products in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of the ten largest. NOT_COMPUTED
- 31.9% (Share of the two jackets in all product sales): The checked code does not compute this figure: it computes each product's sales and the total, not the share of the two jackets. NOT_COMPUTED
- 551 (Customers with three or more orders): The checked code does not compute this figure: it counts customers with two or more orders, not three or more. NOT_COMPUTED
- 45.3% (Share of orders placed by repeat customers): The checked code does not compute this figure: it computes the share of customers who ordered again, not the share of orders they placed. NOT_COMPUTED
- 318 (Orders without an email address): The checked code does not compute this figure: it leaves orders without an email out of the customer count and publishes no count of them. NOT_COMPUTED
- 7,850 (Orders through the online store): The checked code does not compute this figure: it computes net sales per sales channel, not the number of orders. NOT_COMPUTED
- 89.8% (Online store's share of net sales): The checked code does not compute this figure: it computes net sales per sales channel, not a channel's share of them. NOT_COMPUTED
- 531 (Orders at the point of sale): The checked code does not compute this figure: it computes net sales per sales channel, not the number of orders. NOT_COMPUTED
- 6.7% (Point of sale's share of net sales): The checked code does not compute this figure: it computes net sales per sales channel, not a channel's share of them. NOT_COMPUTED
- 196 (Draft orders: phone orders, number of orders): The checked code does not compute this figure: it computes net sales per sales channel, not the number of orders. NOT_COMPUTED
- 36,860.20 (Net sales of draft orders: phone orders, EUR): The checked code does not compute this figure: it computes net sales of all draft orders together (Source shopify_draft_order), not split into phone and wholesale orders. NOT_COMPUTED
- 2.5% (Share of draft orders: phone orders in net sales): The checked code does not compute this figure: it computes net sales per sales channel, not a channel's share of them. NOT_COMPUTED
- 87 (Draft orders: wholesale orders, number of orders): The checked code does not compute this figure: it computes net sales per sales channel, not the number of orders. NOT_COMPUTED
- 14,371.70 (Net sales of draft orders: wholesale orders, EUR): The checked code does not compute this figure: it computes net sales of all draft orders together (Source shopify_draft_order), not split into phone and wholesale orders. NOT_COMPUTED
- 1.0% (Share of draft orders: wholesale orders in net sales): The checked code does not compute this figure: it computes net sales per sales channel, not a channel's share of them. NOT_COMPUTED
- 9,659 (Orders in the raw file): The checked code removes these orders from the count but publishes no figure for them: the number of distinct orders in the raw file. CLEANING_NOT_PUBLISHED
- 9,159 (Orders created in Q1 2026, before exclusions): The checked code removes these orders from the count but publishes no figure for them: the number of orders created in the quarter before test, staff, cancelled and unpaid orders are taken out. CLEANING_NOT_PUBLISHED
- 1,068 (Orders listed twice in the export): The checked code removes these orders from the count but publishes no figure for them: the number of orders the two overlapping exports list twice. CLEANING_NOT_PUBLISHED
- 11% (How much sales would be overstated with the duplicates left in): The checked code does not compute this figure: it removes the duplicates and does not compute what they would have added. NOT_COMPUTED

- 84 (Internal (test and staff) orders excluded): The checked code removes these orders from the count but publishes no figure for them: the number of test and staff orders. CLEANING_NOT_PUBLISHED
- 15,472 (Order value of the internal orders excluded, EUR): The checked code removes these orders from the count but publishes no figure for them: the order value of test and staff orders. CLEANING_NOT_PUBLISHED
- 260 (Cancelled orders excluded): The checked code removes these orders from the count but publishes no figure for them: the number of cancelled orders. CLEANING_NOT_PUBLISHED
- 48,264.50 (Order value of the cancelled orders excluded, EUR): The checked code removes these orders from the count but publishes no figure for them: the order value of cancelled orders. CLEANING_NOT_PUBLISHED
- 151 (Unpaid orders excluded): The checked code removes these orders from the count but publishes no figure for them: the number of unpaid (authorized or pending) orders. CLEANING_NOT_PUBLISHED
- 27,097.65 (Order value of the unpaid orders excluded, EUR): The checked code removes these orders from the count but publishes no figure for them: the order value of unpaid orders. CLEANING_NOT_PUBLISHED
- 500 (Orders created outside Q1 2026): The checked code removes these orders from the count but publishes no figure for them: the number of orders created before or after the quarter. CLEANING_NOT_PUBLISHED

Not submitted for checking

Every number of the report was submitted for checking.

Assumptions

Readings of what the figures mean, settled before the contracts were fixed. The numbers follow these choices rather than the data, so each is a place a reader may disagree.

Reading	Decision	Recorded as
sale_status_basis — Какой статус заказа считается продажей в отчётном периоде?	paid_any_status	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the export has no delivery status; a captured payment is a sale and a refund after it is a return
cancelled_order_policy — Как считать отменённые заказы?	excluded_from_population	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- a cancelled order is voided or refunded at once; neither a sale nor a return
test_order_policy — Как распознаются и куда деваются тестовые и внутренние заказы?	excluded_by_flag	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Tags test and staff mark the shop's internal orders; the vocabulary is closed at gate0
order_grain — Что такое одна строка популяции: заказ или строка заказа?	one_row_per_order	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- orders are the export's first rows; only the product ranking is line-level
marketplace_seller_scope — Чьи продажи входят в отчёт: собственные, продавцов площадки или обе группы?	NOT_APPLICABLE	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- one first-party store; no third-party sellers
refund_rate_basis — На какой базе считается ставка возвратов?	order_rows	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- refunded sale orders over sale orders; the amount is published beside it
partial_refund_policy — Как считается частичный возврат?	counts_as_refunded_order	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- any refund makes an order refunded in the rate; the money figure takes the amount
refund_period_attribution — К какому периоду относится возврат: к периоду заказа или к периоду возврата?	order_period	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Refunded Amount carries no date; a refund sits in its order's month as of the export date
refund_amount_scope — Что входит в сумму возврата: только товар, или и доставка, и комиссии?	goods_only	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- net sales exclude shipping, so only returned goods are taken off them
order_event_date_basis — Какая дата определяет принадлежность заказа	order_date	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Created at is on

Reading	Decision	Recorded as
периоду?		every order; Paid at is blank for unpaid ones
period_boundary_rule — Границы периода включительные с обеих сторон или конец исключён?	inclusive_both_ends	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- 2026-01-01 to 2026-03-31, both days inside
event_timezone_basis — В каком часовом поясе читается дата события?	export_local_date	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Created at is shop time with its offset, as Shopify's own reports assign days
late_revision_rule — Как читается строка заказа, у которой несколько версий в выгрузке?	no_revisions_expected	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- both exports were pulled the same morning; gate0 holds the overlap's copies equal
revenue_recognition — Что такое выручка в заголовке: до или после возвратов?	net_of_refunds	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the menu asks for net sales; gross is published beside it as gross
vat_basis — Суммы в выручке с НДС или без?	vat_inclusive	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- prices include VAT and partial refunds carry no VAT split, so ex-VAT cannot be recomputed exactly
discount_basis — Сумма заказа берётся до или после скидок и промокодов?	after_discounts	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Subtotal is after discount codes; gross and discounts are published beside it
shipping_fee_treatment — Плата за доставку входит в выручку?	excluded_from_revenue	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Subtotal carries no shipping; net sales are goods only
reporting_currency_basis — В какой валюте и по какому курсу суммируются заказы в разных валютах?	single_currency_export	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- EUR on every order, held at gate0
rounding_rule — Где округляются суммы: по строке или в итоге?	round_totals_only	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- amounts are cents already; figures are summed exactly and rounded once
customer_identity_basis — Что такое один клиент?	normalised_email	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- no customer id in the export; Email, lower-case as exported, seen as a pseudonym
guest_checkout_policy — Как считать заказы без аккаунта (гостевые)?	matched_by_email	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the export does not mark account checkouts; orders are grouped by email, no-email orders left out
new_customer_definition — Кто такой новый клиент периода?	NOT_APPLICABLE	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- no new-customer figure is on the menu; the repeat rate names its history depth instead
paying_customer_definition — Кто такой платящий клиент в знаменателе ставок?	at_least_one_sale_in_population	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the repeat rate's denominator is customers with a sale order in the quarter
line_item_unit — Что такое количество в строке: штуки, упаковки или вес?	units_as_exported	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- every product is sold by the piece
bundle_policy — Как считается набор (бандл) из нескольких товаров?	NOT_APPLICABLE	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the catalogue has no bundles
negative_quantity_policy — Что означает отрицательное количество или отрицательная сумма в строке?	negative_rows_are_defects	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Shopify records refunds in Refunded Amount, never as negative lines
zero_amount_row_policy — Как считать строки с нулевой суммой?	kept_in_counts	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the February free gift is a real line at 0.00 and stays in the product table

Reading	Decision	Recorded as
channel_basis — Что такое канал заказа?	sales_channel_column	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Source is where the order was placed, not where the customer came from
promo_attribution_rule — Как заказ относится к промокампании?	not_attributed	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- no campaign figure is on the menu; the discount share is money, not attribution
unknown_channel_policy — Куда идут заказы с пустым или неизвестным каналом?	NOT_APPLICABLE	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Source is never blank and gate0 holds it to three values
duplicate_order_rule — Что делать с повторяющимся идентификатором заказа?	rows_are_line_items	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- a repeated Name is the next line; a repeated Name and SKU is the overlap's copy
truncated_period_policy — Как поступать, если выгрузка не покрывает весь отчётный период?	stop_on_gap	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the order system's log states the range and counts, held at gate0
missing_amount_policy — Как считать строки с пустой суммой?	missing_amount_is_defect	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- no order-level amount may be blank on a first row, held at gate0
free_text_policy — Что делать с колонками свободного текста (комментарии, адреса, заметки)?	quarantined_before_agents	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Notes carries a sentence addressed to an AI
product_sales_basis	after_discounts_before_refunds	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- Refunded Amount does not say which line came back
discount_share_basis	discounts_over_gross_sales	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- discount codes over sales before discounts
repeat_customer_basis	repeat_within_period	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the export holds no history before 2025-12-29
aov_basis	net_sales_per_order	Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- net sales over sale orders, never a mean of means

Domain pack ecommerce, topics: order_population, refunds_and_returns, period_and_time, money, customers, catalog_and_units, channels_and_attribution, export_quality.

Traps of those topics declared not applicable:

- EC-FX-RATE-DATE: Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- one currency, nothing is converted
- EC-GMV-IS-NOT-REVENUE: Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- one first-party store, no marketplace turnover
- EC-UNITS-MIXED: Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- every product is sold by the piece; there is no unit column
- EC-BUNDLE-DOUBLE-COUNT: Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- the catalogue has no bundles
- EC-PROMO-ATTRIBUTION: Ilya, 2026-09-23 (reasoned by Claude (claude-opus-5-5, architect subagent) under Ilya delegation for test runs) -- no campaign figure is published

Is the export complete

The report's numbers are checked against the export. The export itself is checked against totals from other documents: a month or a region missing from it shows in a total, and never in a recomputation.

Total	Stated	In the export	Status	Where the total comes from
last Created at	2026-04-03	2026-04-03	matches	the Shopify admin's record of the two exports it wrote (the client's own system: proves the export is all that system holds, not all that happened)
rows	21687	21687	matches	the Shopify admin's record of the two exports it wrote (the client's own system: proves the export is all that system holds, not all that happened)
distinct Name	9659	9659	matches	the Shopify admin's record of the two exports it wrote (the client's own system: proves the export is all that system holds, not all that happened)
first Created at	2025-12-29	2025-12-29	matches	the Shopify admin's record of the two exports it wrote (the client's own system: proves the export is all that system holds, not all that happened)
sum of Total	1770193.90	1770193.90	matches	the Shopify admin's record of the two exports it wrote (the client's own system: proves the export is all that system holds, not all that happened)

What was not checked

No check recorded a figure it left without recomputation.

What stayed on the machine

Three facts read from the run's own records, not written by hand.

- The pipeline under the lock has no step that starts a model: 11 steps, every one a command; pipeline digest 934a0bf65b7b98fa7c55fc902677a5399f1db962bda75d0e177f27dafa240a5b.
- The driver was started with --offline: at 2026-09-23 18:29 UTC it checked the run's environment for 20 model-access variables -- removed 3 from the run's environment: ANTHROPIC_BASE_URL, OPENROUTER_API_KEY, ZAI_API_KEY -- and journaled it.
- No model launch is recorded: the cost file is absent, the launches folder is absent.

What was proved about the plan

Before the plan was frozen, every check in it was tried: a copy of the data was broken exactly the way that check exists to notice, and the gate was watched for firing. Gate 0 does not mint the lock over a plan without that proof.

Checks tried: 127; fired: 108; accepted untried, by name: 19.

What was not proved, and why

gate	rule	scope	verdict	why
gate0_machine	row_count	raw	no breaker	no breaker is written for this rule
gate0_machine	control_totals_match	raw_orders	caught by another rule	left one row it counts out of orders_export.csv, which the total orders-total-sum describes — stopped by enum_values, no_nulls, source_data
gate0_machine	resolved_decisions_are_declared	audit/human_decisions.yaml	no breaker	breaking it means removing a ruling's declaration from the spec, and which line that is cannot be read off the check
gate0_machine	domain_definitions_answered		no breaker	no breaker is written for this rule
gate0_machine	semantic_traps_are_checked	audit/audit_spec.yaml	no breaker	breaking it means deleting the check that enforces a trap, which changes the plan this tool is proving
gate0_machine	plan_written_over		no breaker	on an audit that registers no hypothesis the rule has nothing to refuse, so breaking it means inventing one -- a change to what the audit asks rather

gate	rule	scope	verdict	why
	profile			than to a value; examples/mutations does exactly that, as method_registered_after_the_look
gate0_machine	step_mode ls_match_ spec	audit/audit_spec.yaml	could not break	pipeline.json has no agent step declaring a model
gate0_machine	plan_proven		no breaker	the rule reads the proof this tool writes, so breaking it means writing a false proof, which is what the rule exists to refuse and not a mistake in the data
gate0_machine	claim_map _resolves		no breaker	no breaker is written for this rule
gate_cleanean_machineline	flag_idenity	is_cancelled	no breaker	no breaker is written for this rule
gate_cleanean_machineline	flag_idenity	is_test	no breaker	no breaker is written for this rule
gate_cleanean_machineline	flag_idenity	is_sale	no breaker	no breaker is written for this rule
gate_cleanean_machineline	flag_idenity	is_refunded	no breaker	no breaker is written for this rule
gate_cleanean_machineline	pii_minimised	clean_orders	no breaker	no breaker is written for this rule
gate_cleanean_machineline	pii_minimised	clean_customers	no breaker	no breaker is written for this rule
gate_metrics_machine	recompute_group	line_net	caught by another rule	changed the recorded value of product_sales_total in calculated_metrics.json — stopped by component_sum, recompute_metric
gate_claims_machine	claims_are_single_assertions		no breaker	breaking it means writing a claim that is a folder of figures, which is a judgement about wording rather than an edit to a value
gate_release_document	wording_matches_claims	claims	no breaker	no breaker is written for this rule
gate_release_document	free_text_quarantined	claims	no breaker	no breaker is written for this rule

Where this check came from

- Shape pack shopify-orders version 1, stage cleaning: its code was reviewed in run 2026-09-23 15:39 UTC of dataset shopify-orders-claude-build under profile claude-build; the stage's code was fixed at 2026-09-23 17:05 UTC, digest a7186263e5587df698536c5b35eae5717d42eb31debe9ef5f343f60ee8c4dd8.
- Shape pack shopify-orders version 1, stage metrics: its code was reviewed in run 2026-09-23 15:39 UTC of dataset shopify-orders-claude-build under profile claude-build; the stage's code was fixed at 2026-09-23 17:05 UTC, digest fa198cb58f8846858e242e695cfbdd499351f02317dc68d751acf0ca55b207e9.
- Profile verify, revision b8c78dba5429e2faf28993230e977f164d8c6316. Raw protection: no_agent_runs.
- Digest of the fixed contracts: 5824e4456f11b1b73580ef4cfe2439a496dc6d72aac9d8ed12d89d3783bbf048.
- Python 3.12.10, SQLite 3.49.1.

The rules' questions in English

Rule	Question
sale_status_basis	Which order status counts as a sale in the period?
cancelled_order_policy	How are cancelled orders counted?
test_order_policy	How are test and internal orders recognised, and where do they go?
order_grain	Is one row of the population an order or an order line?
marketplace_seller_scope	Whose sales are in the report: the shop's own, marketplace sellers', or both?
refund_rate_basis	What is the refund rate taken over?
partial_refund_policy	How is a partial refund counted?
refund_period_attribution	Which period does a refund belong to: the order's or the refund's?
refund_amount_scope	What does a refund amount include: the goods only, or shipping and fees too?
order_event_date_basis	Which date puts an order in a period?
period_boundary_rule	Are the period's bounds inclusive at both ends, or is the end excluded?
event_timezone_basis	In which time zone is an event's date read?
late_revision_rule	How is an order line read when the export holds several versions of it?
revenue_recognition	Is the headline revenue before or after refunds?
vat_basis	Are revenue amounts with VAT or without?
discount_basis	Is an order's amount taken before or after discounts and codes?
shipping_fee_treatment	Is the shipping fee revenue?
reporting_currency_basis	In which currency, and at which rate, are orders in different currencies added up?
rounding_rule	Where are amounts rounded: per line or in the total?
customer_identity_basis	What is one customer?
guest_checkout_policy	How are orders without an account (guest checkouts) counted?
new_customer_definition	Who is a new customer of the period?
paying_customer_definition	Who is a paying customer in the denominator of a rate?
line_item_unit	What is the quantity on a line: pieces, packs or weight?
bundle_policy	How is a bundle of several products counted?
negative_quantity_policy	What does a negative quantity or amount on a line mean?
zero_amount_row_policy	How are rows with a zero amount counted?
channel_basis	What is an order's channel?
promo_attribution_rule	How is an order attributed to a promotion?
unknown_channel_policy	Where do orders with an empty or unknown channel go?
duplicate_order_rule	What is done with a repeated order id?
truncated_period_policy	What if the export does not cover the whole period?
missing_amount_policy	How are rows with an empty amount counted?
free_text_policy	What is done with free-text columns: comments, addresses, notes?
product_sales_basis	What are a product's sales?
discount_share_basis	What is the discount share taken over?
repeat_customer_basis	Who is a returning customer?
aov_basis	What is the average order value?
